OBJECTIVE

I chose CS for the creative liberties it offers in programming and the challenging puzzles involved in finding optimal solutions. I am an eager student who loves working with data to uncover valuable insights using machine learning. I enjoy applying my technical skills to explore solutions for environmental challenges while experimenting with creative ideas. Interested in pursuing a master's degree in machine learning or computer engineering to deepen my knowledge in the field.

EDUCATION

East Tennessee State University

Bachelor of Science in Computer Science

GPA: 3.67

Johnson City, TN

August 2022 – December 2025

EXPERIENCE

East Tennessee State University

Undergraduate Machine Learning Research

Johnson City, TN

June 2024 – May 2025

- Applied ML to distinguish human-written vs. AI-generated code under Dr. Brian Bennett.
- Created a dataset, engineered Python feature extraction, and consolidated features into a training CSV.
- Evaluated SVM, decision tree, and random forest models; documented methodology and results.

Silgan Closures

Intern

Kingsport, TN

June 2022 – August 2022

- Rotated through Engineering, Quality, Maintenance, and Supply Chain to learn plant operations.
- Mapped copper piping with CAD and authored machine work instructions.
- Performed precision measurements of caps and recorded results in a production database.

PROJECTS

Laurel Dace Habitat Modeling for Tennessee Aquarium | *Python, GIS*

June 2025 – Present

- Collaborate with Dr. Bernie Kuhajda and GIS specialist Emily Culp to segment Chattanooga creeks and collect environmental features.
- Engineered a dataset using the stream attributes as features and the presence of the Dace as labels.
- Prototyping Random Forest, MaxEnt, and One-Class SVM to identify potential habitats for the endangered Laurel Dace.

Yoda-Style Text Generation (RNN) | *Python*

Mar 2025 – May 2025

- Implemented 2-layer LSTM for character-level generation with custom tokenizer and persistent vocab.
- Tuned hyperparameters for stability and improved sample quality.
- Built a lightweight GUI for prompt input and text generation.

Wordle-Style Game | *HTML/CSS, JavaScript*

Mar 2025 – Apr 2025

- Guided a small team in Agile ceremonies (standups, sprint planning, retrospectives).
- Implemented core game logic and responsive UI; managed Git-based workflow.
- Kept the project on track by resolving conflict, tracking progress daily, and meeting each sprint's goal.

TECHNICAL SKILLS

Languages: Python, C#, Java, HTML/CSS, C, Assembly, SQL, LaTeX

Skills: Machine Learning, OOP, Software Design Patterns, API Integration, Scrum, pandas, scikit-learn, lizard

Tools: VS Code, Visual Studio, Docker, Arduino, Eclipse, SQL Developer, AWS
